

IT'S ABOUT TIME

Immediate Spill Blocking Newsletter

May 2018

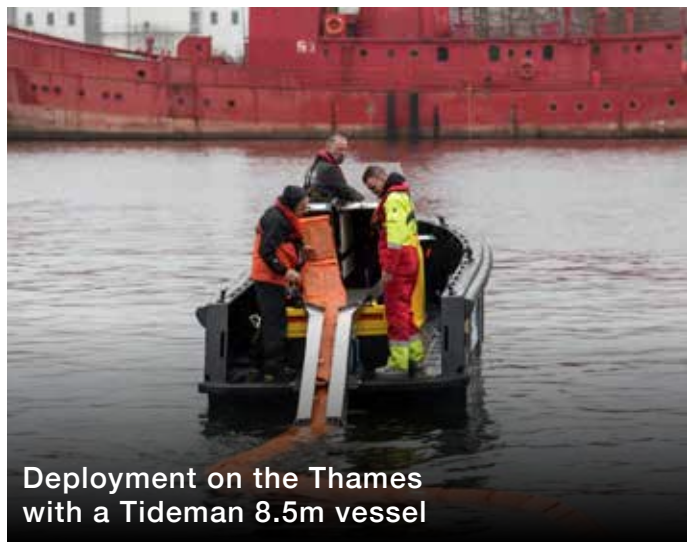

Deployment at the Port of Rotterdam by HEBO's responder.

T-Fence is commercially available!

HARBO Technologies Launched a Revolutionary Oil Spill Blocking System at Interspill London

HARBO's new paradigm is gaining more traction every day. Stakeholders around the world agree that blocking oil spills before they spread will help prevent devastating consequences.

T-Fence™ is capable of blocking spills before they spread, as it is the only system in the world that is small and light enough to be installed at every potential spill site. Within minutes of spill detection, two operators on a vessel the size of a lifeboat will deploy up to 1 km of T-Fence™ around the spill, preventing it from spreading and splitting. The disposable solution will enhance oil spill responder operations.

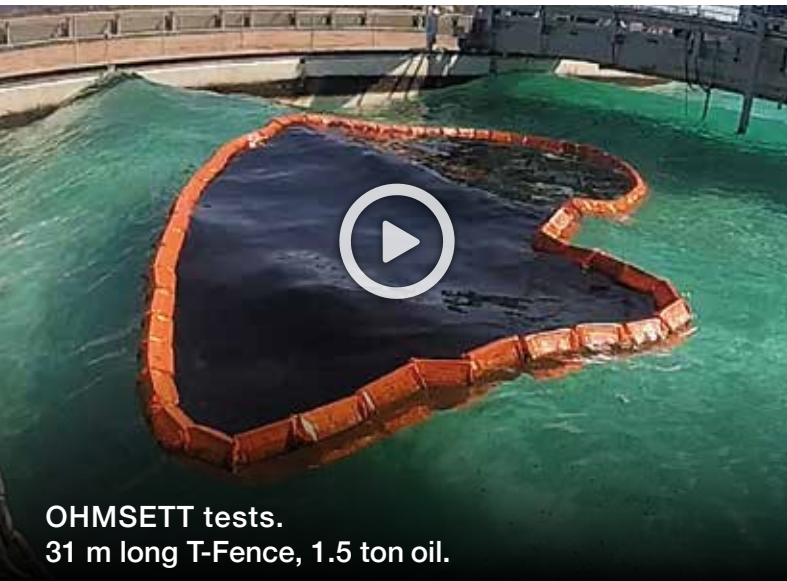

Deployment on the Thames with a Tideman 8.5m vessel

At Rotterdam Port with 400 m of boom.

HARBO tested T-Fence™ at OHMSETT and offshore to validate its unprecedented oil containment capabilities. T-Fence™ has a 4.5 inch freeboard and an 8 inch draft. While its properties enable it to ride the waves efficiently, it weighs only 6.5 oz per foot. A cartridge holding a 25 m cartridge weighs 23 kg. Practically, no logistics are needed.

This system is a game changer. It finally adds a long-anticipated layer of protection to oil spill response - the ability to block spills right when they start, wherever they occur and with local operators. In oil spill response, it's all about time. Blocking a spill from spreading in the first 10-30 minutes after it happens will multiply the recovery rates seen today and prevent disastrous consequences.

OHMSETT tests. 31 m long T-Fence, 1.5 ton oil.

This video shows HARBO deployments around the world:

OHMSETT, New Jersey

Tel Aviv offshore, Israel

Port of Rotterdam (by HEBO Maritiem)
